MGUARD

ULTRA ABSORBENT BIB

4-ply paper + 1 ply polyethylene

- Top Quality
- 4 ply paper + 1 ply polyethylene
- Ultra absorbent soft texture
- Embossed design for superior fluid retention
- Won't Delaminate
- Convenient sealed drawer pack of 100 sheets
- Available in 2 sizes
- Preferred for patient Bib or Tray liners

40107 Small Bib MGuard, 4-Ply Paper + 1 Ply Polyethylene, White, 28.5 cm x 21.5 cm

40106 Large Bib MGuard, 4-Ply Paper + 1 Ply Polyethylene, White, 28.5 cm x 43.0 cm

REDUCE SEVERE PAIN IN 2 HOURS!

007698 Ledermix Paste 5G

\$192,⁵⁰
EACH

Why Ledermix Paste?

Prof Paul Abbott

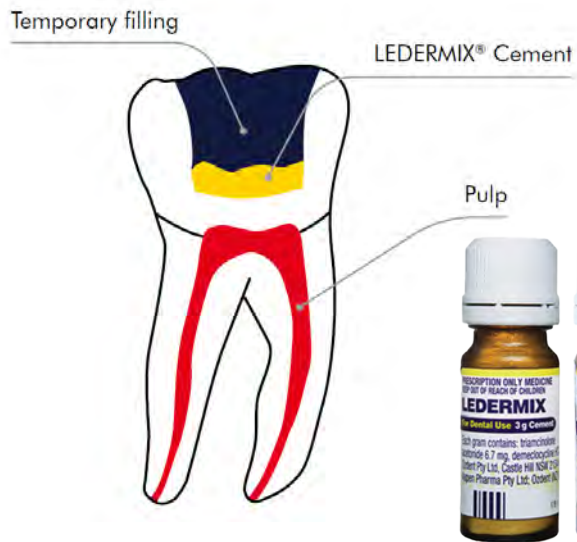

1. Ledermix Paste predictably reduces post-operative pain following endodontic procedures since it reduces periapical inflammation and/or reduces inflammation in any residual pulp tissue left in the root canal.
2. Pain reduction following the placement of Ledermix Paste is very rapid.
3. Ledermix Paste can also be used for the endodontic management of external inflammatory tooth resorption - it is the ideal intracanal medicament to use when you need to prevent external inflammatory resorption, plus it can arrest this resorption if already present.
4. Ledermix Paste can be used as an initial intracanal medicament as it has anti-inflammatory action plus antibacterial action.

Ask For Bulk Price

Why Use Ledermix Cement?

Prof Paul Abbott

1. Ledermix Cement is an ideal pulp capping and pulpotomy material when managing reversible pulpitis.
2. Ledermix Cement has anti-inflammatory and antibacterial activity, plus it contains calcium hydroxide and zinc oxide-eugenol, all of which contribute to its therapeutic actions in reducing inflammation of the pulp.
3. Pain reduction with Ledermix Cement is extremely rapid.
4. Pulp survival following management of reversible pulpitis is predictable.

"Ledermix cement has revolutionized my practice with its pain-free treatment. I confidently use it for all deep fillings, enhancing patient satisfaction due to pain-free properties hence increased business."
Dr Shaun Lajevardi Dentist

CALMIX

SPECIAL OFFER
Trade 1 Buy 1*

"Calmix is one of the calcium hydroxide pastes I use in my clinic, I utilise it mainly when I dress root canals for a few months due to its long term release of hydroxyl ions."

Omar Ikram Endodontist

*Trade 1 Buy 1 Conditions:

- Only Calcium Hydroxide Dressings are eligible for trade-in.
- Trade-ins must be collected by dealer representative.
- A complimentary syringe will be delivered directly to the surgery by Ozdent.
- The trade-in is not required to be full syringe

6201 Calmix High PH Hydroxide Paste Syringe 1.5ml+Tips

Why Use Calmix?

Prof L. Walsh

Calmix is a high performing calcium hydroxide paste used in Australia and overseas in a range of endodontic treatments. It differs from all other marketed calcium hydroxide products around the world because of its unique patented composition, which greatly increases its effectiveness and usability. Other marketed calcium hydroxide pastes use water is the solvent, and the poor solubility of calcium hydroxide in water greatly limits the availability of both hydroxyl and calcium ions. Australian world first research that has been published in leading materials science journals shows that the unique water-free polymer-based solvent used in Calmix greatly increases the amount of dissolved calcium hydroxide. As a consequence, Calmix can achieve a much higher alkaline pH both in the root canal and in the adjacent dentine, making it able to inactivate bacteria as well as fungi, including highly resistant species such as *Enterococcus faecalis*. At the same time, the release chemistry ensures that the highly effective antimicrobial action extends across the full thickness of the dentine, reaching bacteria and fungi that are located deep within dentine tubules. The unique solvent base of Calmix gives it very high biocompatibility and very low cytotoxicity; making this material superior to other marketed calcium hydroxide pastes.

The material has also been designed to be easy to use, with optimised flow rates when delivered through small tips. Unlike other marketed calcium hydroxide pastes, Calmix does not dry out, because it contains no water. It flows well regardless of shelf life. Calmix was invented in Australia and is manufactured in Australia. The technology used in Calmix is protected by numerous Australian and overseas granted patents.

Calmix is used by many general dentists as well as by endodontists. It has a strong base of supporting science with numerous publications from independent University research conducted in Australia by endodontists and eminent senior researchers.
